Jing Chen

Software engineer with 5 years in product design, now completing a Master of IT at UNSW (WAM 80, Distinction). I design, build and test full-stack web apps with React, Next.js, TypeScript and PostgreSQL, using Claude Code and Codex.

Projects

Weekly Planner: Plans one-off and repeating tasks, with Google sign-in, guest mode and dark mode.
Try it · GitHub · Figma
Tech Stack: Next.js, TypeScript, Prisma, PostgreSQL, Better Auth, Vitest

- Designed and built a full-stack planner. Repeating tasks are stored as versioned rules, so “edit this and future tasks” runs in one database transaction and never changes past weeks.
- Guest mode: one click opens a sample week with no sign-in. Guest accounts are deleted after 7 days.
- Built with Claude Code, with 35 unit and database tests.
- Meets WCAG AA contrast in light and dark modes.

Popcorn Movie Recommender: Recommends films from an idea, then re-ranks 5,000 films as the user likes, dislikes or saves them.
Try it · GitHub · Figma
Tech Stack: React, Vite, transformers.js, ONNX, Python, sentence-transformers

- Designed and built the whole product, from the data pipeline to the interface. Tested it with users, then added a detail view with trailer, runtime and age rating so people can decide whether to watch.
- Embedded seven text fields per film separately, weighted per query automatically.
- Compressed the film vectors from 53.8 MB to 6.7 MB with PCA and int8, and moved the query model into the browser, so the site runs with no server. A full re-rank takes about 15 ms.
- Scored 17 test queries by hand against rules written before seeing any results: 75% precision@10.

Education

UNSW · Master of IT: Jun 2025 - Graduating May 2027
Front-end Web Programming, Recommender Systems, Rust, AI, Machine Learning, Data Service Engineering

Tianjin University · Bachelor of Software Engineering: Sep 2006 - Jun 2010

Skills & Tools

- **Languages:** TypeScript, JavaScript, Python, Rust
- **Frontend & Backend:** React, Next.js, Node.js, Tailwind CSS, HTML, CSS, Accessibility (WCAG), Prisma, PostgreSQL (Neon)
- **Data & Machine Learning:** sentence-transformers, ONNX, scikit-learn, transformers.js, Recommender systems
- **Product Design:** UX/UI, user research, Figma, Adobe Creative Suite
- **AI Coding & Developer Tools:** Claude Code, OpenAI Codex, Git, Vitest, Gemini, Vercel

Experience

Career Break: Dec 2020 - Jun 2025
Caring responsibilities. Prepared and returned to study to move from product design into software engineering.

Part-time Infographic Designer · University of Twente: Jun 2022 - Sep 2022
Collaborated with researchers at the ITC Faculty to develop flow diagrams and data-related infographics used in research papers.

Product Designer · PaperKite: Nov 2018 - Dec 2020
Designed mobile and web products for clients including bp, BNZ, Farmers and the Ministry of Health, working with client teams and developers through to delivery.

- bp NZ: added car-wash purchasing to the BPMe app, based on a field study at a bp station and customer interviews.
- Farmers: ran design workshops with the client and built the club app's design system, aligned with Farmers' style guide.
- aboutGOLF: redesigned the golf companion app with teams across several countries; it won a CES 2020 Innovation Award.

UX Designer · Chunbo: Jun 2015 - Apr 2018

- Led UX/UI for an online grocery platform across web and mobile.
- Redesigned checkout for multi-package delivery, working with storage, delivery and customer-service teams. A/B tested before launch: checkout completion up about 10%.
- Designed food-safety labels from staff and customer research. A/B tested: add-to-cart up more than 7%.

Product Manager: Jun 2010 - Jun 2015
Worked at DKHL, Douban, Kaixin001, in Beijing.
